

What Exactly Is Git?

Git is like a time machine for your project.
It remembers every important version.

Git saves snapshots of your work so you can go back anytime.

Every checkpoint is a **version** (or commit).
You can always go back to any point!

Git remembers:

What happened

When it happened

Who made the change

What the project looked like

👉 README: The Welcome Guide 👈

A great project starts with a great **README**.
It tells people what your project is and how to use it.

A README IS...

A friendly welcome to your project.

Explains what it is and why it matters.

Shows how to get started and use it.

Invites others to contribute and collaborate.

Builds trust and helps your project grow!

Good code is important.
Great README
is unforgettable.

I don't save after every word.
I save at important milestones!

COMMITTS

Meaningful progress points in your project.
Not every tiny edit.

A commit is like adding a bookmark at a **meaningful** moment.

1 Finished Chapter 1

Big progress! Time for a commit.

Solid foundation.
Good checkpoint!

2 Fixed Grammar

Improved quality. Worth saving.

Better clarity.
Another good commit!

3 Improved Ending

The story is stronger now.
Commit again!

Stronger ending.
Great milestone!

NOT EVERY TINY EDIT

Small edits happen all the time.
No need to commit for these!

Fixed a typo

Skip commit

Changed a word

Skip commit

Adjusted a sentence

Skip commit

Tweaked punctuation

Skip commit

Think:

Would future-me be glad I saved this?
If **yes**, **commit it!**

BRANCHES

Branches let you **explore new ideas** without changing the original.

Branches keep the main story safe while you experiment.

Safe to try. Easy to come back.

MAIN STORY (main branch)

The original manuscript.

This stays exactly the same unless you change it on purpose.

OFFICIAL ENDING

Stays focused and polished.

Clean, final version.
This is the path readers will see.

SPACE ADVENTURE ENDING

A fun experiment!

Wild ideas live here.
If it doesn't work, no problem!

You decide to try something new...

What if our hero goes to space?

You can always go back to the main story. Nothing is lost.

WHY BRANCHES ARE AWESOME

Experiment safely

Go back anytime

Work on different ideas at the same time

One main story.
Many possible adventures.

Cloning downloads the entire project—everything you need!

CLONE

Clone creates a copy of a repository on your computer.
Now it's yours to explore and work on!

I have my own copy!
Let's start building something amazing!

Stored safely in the cloud and accessible to the team.

CLONE

Downloads a complete copy of the repository to your computer.

Your own working copy. You can edit, experiment, and make changes freely.

CLONE = YOUR STARTING POINT

Get the full project

Work offline

Experiment freely

Push changes back later

Your adventure starts here!

The original project remains safe and unchanged.

Forking creates your own copy under your GitHub account.

You can modify, experiment, and make it your own.

Contribute back if you want to help the original project grow!

BRANCH vs CLONE vs FORK

Three different ways to work with projects. *Know the difference!*

BRANCH

Different path, **same** project.

You create a new branch to try ideas without changing the main story.

Stays in the same repository.
Good for experimenting safely.

CLONE

Copy it to **your** computer.

You clone a repository to get a complete copy on your machine to work on.

Creates a local copy on your machine.
You can work offline.

FORK

Copy it to **your** account.

You fork a repository to your own GitHub account to freely change it.

Creates your own copy on GitHub.
You can modify freely and even share it.

QUICK SUMMARY

Branch = explore different paths within the **same** project.

Clone = copy the project to **your** computer.

Fork = copy the project to **your** GitHub account.

REPOSITORY

A repository is the home for everything related to your project.

Think of it as a big project folder that holds all your work!

ORGANIZED TODAY, AWESOME TOMORROW!

Great stories start here! ★

Your repository contains all the files, folders, and history of your project.

Everything in one place:

- ✓ Your writing
- ✓ Your assets
- ✓ Your ideas
- ✓ Your progress
- ✓ Your history

Clean, organized, and always safe. That's the power of a repository!

ONE REPOSITORY.
ALL YOUR WORK.
TOTAL PEACE OF MIND.

Everything is backed up.

Track every change.

Share and collaborate.

Safe, secure, and reliable.

Focus on creating amazing things!

GitHub: The Publishing House

Where great ideas become amazing projects.

WHAT IS GITHUB?

GitHub is a place to store your Git projects online. It helps teams collaborate, track changes, and ship amazing work—together!

GITHUB
MAKES TEAMWORK EASY

Access your project from anywhere.

Work together in real time.

Discuss, review, and improve together.

Safe, secure, and backed up.

Publish your best work to the world!

MERGING

Bring the **best ideas** from a branch back into the main story.

Merging combines changes from one branch into another. It makes your project **better, together**.

MAIN STORY (main branch)

This is the official manuscript. Stable and ready for readers.

EXPERIMENTAL BRANCH (space-ending)

A creative experiment. We tried something new!

MERGE!

MAIN STORY (improved!)

WHAT HAPPENED?

- ✓ Good ideas from the branch are combined into the main story.
- ★ The main story becomes stronger.
- ★ Everyone wins!

✓ The space ending is now part of the official story!

MERGE = MAKE IT BETTER

Experiment freely. Merge confidently. That's how **amazing projects** are built! ♥

PRO TIP: Review changes, make sure they fit, and then merge. → Quality + Creativity = Great Story! ♥

MERGE CONFLICTS

MAYA'S VERSION
(Edited the same line)

Sometimes people change the same part in different ways.

Git just needs help deciding!

ALEX'S VERSION
(Edited the same line)

MERGE CONFLICT = NOT A DISASTER!

It just means Git found different changes and wants you to choose.

AFTER YOU DECIDE

You're back on track with one awesome story!

KEEP
IN MIND

Communicate with your team.
It helps avoid conflicts!

Conflicts are normal.
Even pros get them.

Be kind to yourself.
You're learning!

PULL REQUEST

A request to review and merge your changes.
Not a direct edit to the original.

HOW PULL REQUESTS WORK

1. You make improvements in your version.

2. You open a Pull Request to share your changes.

3. Reviewers check, comment, and discuss your changes.

4. If approved, your changes can be merged into the original!

Pull Requests = Collaboration, Feedback, and Better Stories Together!

ISSUES: Great stories get better with feedback! 🌟

Issues help our team track tasks, ideas, bugs, and discussions
so we can make the book amazing.

Issues are...
tasks, ideas,
bug reports, and
discussions.

They help us
stay organized
and collaborate
better.

We track, prioritize,
and work on what
matters most.

Happy readers.
Happy team.
Amazing stories! 💖

PROJECTS

Organize work. Track progress. Finish amazing books.

Projects help teams **see** what needs to be **done**—and what's already **done**!

Let's design an epic cover!

WITHOUT PROJECTS...

What was I supposed to do?

Did I fix the typos?

Where is that dragon idea?

Um... what comes next?

Hard to remember.
Easy to forget.
Work gets messy.

PROJECTS = CLARITY ✨
FOCUS • FLOW • FINISH!

See everything
in one place.

Work together
as a team.

Track progress
at a glance.

Finish books.
Celebrate wins!

★ STARS ★

Stars are bookmarks and high-fives for awesome projects!

STARS = BOOKMARKS
+ APPRECIATION

They don't change the project.
They show: "This is awesome!"

A REALITY CHECK

ME TODAY...

FUTURE ME...

Tip: Star intentionally.
Your future self will thank you!

RELEASES

Stable. Official. Ready for the world.

Releases are official versions of a project—carefully tested and ready for others to use.

Why we release:

- ✓ Stable and reliable
- ✓ Easy to find and use
- ✓ Clear version history
- ✓ Builds trust

THE SPACE ADVENTURE BOOK

A JOURNEY OF IMPROVEMENT

v1.0

The first launch!
Lots of potential.

v2.0

More chapters,
better illustrations,
stronger story.

v3.0

LATEST

The best version yet.
Stable, polished, and
ready for adventurers!

Here's the latest release! ✨
Enjoy the adventure!

WHAT YOU GET IN A RELEASE

- Final content
- Tested & stable
- Easy to install or download
- Versioned clearly

RELEASES MAKE IT EASY FOR EVERYONE

Readers get a smooth experience

Developers can build with confidence

New users can start their journey the right way

The project grows stronger together!

ONE BOOK. MANY EDITIONS. ALWAYS BETTER.

Releases mark our milestones and help others join the adventure with the best version possible.

CONTRIBUTORS

Many people. Many skills. One amazing book.
Every contribution makes the story better!

Contributors are **co-authors** of the story.

Big or small, **every** contribution moves the story forward.

Collaboration creates **better** books.

Learn, share, and **grow** together.

Thank you, contributors!
You're **awesome!**

Discussions

A space to talk, share ideas,
and make better books together—
before any code (or chapters) are written.

Feature idea

What if readers could choose their own path in the story?

Question

Should Chapter 5 be from the villain's point of view?

Feedback

Loved the twist in Chapter 2!
So unexpected!

Suggestion

Can we add a map of the galaxy?

Use Discussions to:

Share ideas
& suggestions

Ask questions
& get clarity

Give feedback
& help improve

Build understanding
before taking action

Good conversations
lead to great creations.

Discussions bring ideas together so the right work gets done for the right reasons.
